

Abstract

The present invention is a recording method
for a record medium, comprising the steps of embedding
a plurality of types of management information provided
5 corresponding to a plurality of types of record mediums
as additional information to data of a content that is
recorded, performing a first encoding process for the
data of the content to which the additional information
has been embedded, performing a second encoding process
10 for the plurality of types of management information;
and modulating the data of the content of which the
first encode process has been performed and the
plurality of types of management information of which
the second encode process has been performed. The
15 present invention is also the record medium.
